OTUS ANALYTICS

Otus Hotel Brand Database Overview report: Europe 2012

## Otus Analytics reports

This overview provides information about the shape of the European hotel market, detailing the largest chains at each market level - just 15 chains out of the nearly 900 that the Otus Hotel Brand Database ("OHBD") includes.

Otus defines a chain as four or more hotels under common management or franchise, so the 15,900 hotels in the database include companies from Accor to Zleep. You will find more detail of the Otus methodology at the end of this report, as well as explanations of the terminology that we use.

## Now available:

Hotel chains in Europe 2012 - the full report
Extensive detail on the brands and structure of the European chain hotel market as a whole and of each of the continent's country hotel markets

Hotel cities in Europe 2011 - the top 44
44 European cities have more than 6,000 chain hotel rooms - making them major or primary conurbations in Otus terms. Which are they? How do they rank? And which brands are dominant in these key markets?

OTUS ANALYTICS

## Otus Hotel Brand Database Overview report: Europe 2012

## Continent statistics

## Otus hotel market data

| Europe chain hotel market (rooms) | $1,985,000$ |
| :--- | ---: |
| Total hotel market (rooms; Otus estimate) | $5,400,000$ |
| Chain hotel concentration | $37 \%$ |
| Countries with chain hotels | 48 out of 54 |
| Conurbations with chain hotels | 4,900 |
| Brands | 940 |

The European chain hotel market at end-2011 comprised about 15,900 hotels with 1.99 million rooms. These hotels are spread through 48 of Europe's 54 countries in about 4,900 cities, towns and villages. Otus estimates the total hotel market in Europe at 5.4 million rooms, meaning that the chains form $37 \%$ of the market.

Accor is by far the largest company, with more than 270,000 rooms and four of the top ten brands (by number of rooms):

| Top ten brands, end-2011 | Hotels | Rooms | Average sizePercentage of <br> total rooms |  |
| :--- | ---: | ---: | ---: | ---: |
| Ibis | 715 | 76,303 | $3.8 \%$ |  |
| Mercure | 503 | 57,349 | 107 | $2.9 \%$ |
| Holiday Inn | 284 | 46,000 | 114 | $2.3 \%$ |
| Premier Inn | 606 | 44,929 | 162 | $2.3 \%$ |
| Novotel | 259 | 42,877 | $2.2 \%$ |  |
| NH Hotels | 276 | 41,550 | 166 | $2.1 \%$ |
| Radisson Blu | 175 | 40,305 | 151 | $2.0 \%$ |
| Hilton | 155 | 40,285 | 230 | $2.0 \%$ |
| Etap | 431 | 36,827 | 260 | $1.9 \%$ |
| Travelodge | 493 | 33,528 | 85 | $1.7 \%$ |

As we update the database each year, we revise earlier years' numbers - we discover new chains, find that hotels that seemed to be closed were just resting, and occasionally, even, we make mistakes. Our current figures for end-2010 are 1.95 m chain rooms in 15,587 hotels. So net market growth in 2011 was 36,000 rooms or $1.8 \%$, down from $2.8 \%$ in 2010, $2.9 \%$ in 2009 and $3.7 \%$ in 2008. The global majors as a group had an excellent year, with net growth of $6.8 \%$ as Marriott's deal with AC and Wyndham's acquisition of Tryp came into effect. But the other companies within the group fared very differently, with Choice, Hyatt and Starwood shrinking, IHG and Carlson growing moderately and Accor and Hilton growing organically but strongly.

You'll find the detail in our full reports - meanwhile, here's the overview.

## Chain hotel market overview

| Europe | Hotels | Rooms | Average size | Percentage of total rooms |
| :---: | :---: | :---: | :---: | :---: |

## Notes

The Otus Hotel Brand Database (OHBD) is the most complete and consistent database of chain hotels in the world. It currently covers Europe - from Iceland to Kazakhstan - and is being extended to cover Africa, Asia and the Middle East. It attempts to include every chain of four or more hotels, where a chain can be defined by common branding or operation. For each hotel it records a number of hotel properties - e.g. number of keys and market level - and locational properties, including the full address, as well as details of branding, operation and ownership.

The database has existed in some form or other since the 1980s and is used by Otus to track the development of the chain hotel market and to analyse the market's relationship to economic conditions. Otus both advises clients on strategy and searches for merger or acquisition opportunities, so the data is sometimes used at the highest level of aggregation and sometimes to pinpoint specific hotels. So it's important that we maintain a high level of accuracy in the content.

## Database scope

We include, of course, all the major international chains - the Hiltons and Starwoods of the world - with all their brands. We also include smaller, regional chains which operate or franchise hotels. And if an operator runs a bunch of hotels, some under franchise and others without a flag, we include everything in the operator group. Similarly, if an owner of four or more hotels has some or none run without any obvious branding, or uses a set of brands none of which is itself four hotels, we include the whole group. And where a company has less than four hotels in Europe but makes up the number in other parts of the world, we include that company.

What we don't include is hotels that are members of consortia like Best Western - unless of course they are also part of an operator or owner chain such as Chardon Management or Pandox.

We update the database at the end of each calendar year, including hotels that actually exist and have opened for business on or before 31st December (even if some rooms are closed for refurbishment or for seasonal reasons). But we don't include hotels that have been announced or even ones that have been built but aren't opening until the next calendar year. For these reasons, our numbers won't always exactly match those given by the hotel companies themselves - but we try to be objective and consistent throughout.

What that means is that at the end of 2011 we recorded 15,900 hotels in Europe, affiliated to about 900 brands, some very big but most quite small.

In order to derive detailed pictures of markets, portfolios and brands, the main entities that the database tracks are hotels, brands and the companies that own or operate the hotels and brands.

## Data

The database includes details of each hotel's configuration, location and corporate affiliation.

Under the first of these, the database records the number of rooms and classifies it by market level ${ }^{1}$, hotel configuration ${ }^{2}$ and rooms configuration. ${ }^{3}$ Each of these classifications

[^0]is objective: it is particularly important to note that market level is a measure of the level of investment in the hotel room, which can be seen from things like room size and type and quality of fixtures and fittings. It is not an indicator of the quantity and quality of nonrooms facilities - so it is possible within the Otus system for a "rooms-only" hotel to be classified as luxury or for an extended feature hotel to be at budget level.

## Market level

The Otus classification of each hotel in the database is made with reference to the following list of "benchmark brands":

| Deluxe | Up-market | Mid-market | Economy | Budget |
| :--- | :--- | :--- | :--- | :--- |
| Four Seasons | Clarion | Courtyard | Campanile | Etap |
| Luxury Collection | Crowne Plaza | Four Points | Comfort | Formule 1 |
| Mandarin Oriental | Hilton | Holiday Inn | Days Inn | Première Classe |
| Orient Express | InterContinental | Novotel | Holiday Inn Express |  |

| Waldorf Astoria | Radisson Blu | Scandic |  |  |
|  | Renaissance |  |  |  |
|  | Sheraton |  |  |  |

Most of the big brands have a consistent market level: two exceptions have been NH , which does not subdivide its hotels within the brand, and Mercure which used to be Accor's catch-all brand. So NH has economy, mid-market, and up-market hotels all under the same label - though last year it introduced "Collection", "Express" and "Resort" sub-brands as well. Mercure has until the last year or so covered hotels from economy to up-market, though it has now pretty much settled in the mid-market.

[^1]
## Hotel configuration

Hotel configuration is assessed according to the following table:

| Non-rooms facilities | Extended <br> feature | Full <br> feature | Basic <br> feature | Limited <br> feature | Rooms <br> only |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Restaurants (minimum) | 1 | 1 | 1 | 1 | 0 | | Bars (minimum) |
| :--- |

This multi-parametered classification has clear advantages over any single-parameter system and, so far as we are aware, is the only system of hotel grading to be applied consistently throughout Europe.

## Conurbation size and type

The database then records each hotel's address and derives from it the locational information that we use in our analysis: the conurbation (city, town or village ${ }^{4}$ ) in which it is situated or to which it is nearest and, for cities, a location type: urban, suburban or airport.

From these records we are able to classify conurbations in terms of the number of chainaffiliated hotel rooms that they contain. This can be done by giving precise numbers, but we find it meaningful to classify conurbations as major (more than 30,000 rooms), primary (more than 6,000 ), secondary (more than 1,500 ), tertiary (more than 500) and quaternary. There were only two major conurbations in Europe - London and Paris - in 2009; they have been joined by Berlin in 2010, following remarkable growth in the past four years, while there are forty primary conurbations, a few hundred secondary and tertiary conurbations and thousands of quaternaries.

## Brands

We segment the chains into three convenient sets: the global majors; ${ }^{5}$ "national" chains whose activities are exclusively or predominantly in a single country; and the "internationals" - everything else.

[^2]
## Other Otus products and services

Alongside the database we have a number of tools for evaluating and comparing hotel portfolios and brand strength. Our historic data also supports detailed analysis of market development and likely future trends.

## Demand

We track demand in volume terms - room nights sold - rather than RevPAR. The quality of demand data available varies from country to country; we attempt in every case to arrive at reasonable estimates of demand into hotels (as opposed to the "hotels and similar" categorisation used by the UNWTO) and at the segmentation of demand between domestic or foreign and business or leisure travel. We also estimate the split of demand between the chain and unaffiliated sectors. (Using our proprietary analytical tools, these estimates can then be combined with rate and occupancy data from third parties, ideally for known sample sets, to arrive at estimates of the cash value of hotel markets in particular locations and thence to estimates of market share for particular hotels or chains.)

## Economic context

Levels of supply as well as domestic and foreign business demand, and of domestic leisure demand, depend not simply on GDP growth or the economic cycle but on the size and importance of different sectors of the economy. We therefore undertake detailed economic research to profile and track the economic structure of each country over time. We also examine the economic policies of each country to identify their impact on hotel supply and demand.

## Forecasts

We combine our historic and current information with our economic analysis to generate a range of ten-year demand forecasts, based on different possible economic scenarios. Given the extent of likely future demand, we are able to derive implications for supply: what categories of hotel, in what locations, will be required to meet the demand growth and which will be surplus to requirements.

[^0]:    1 Market levels: Luxury, Up-market, Mid-market, Economy, Budget

[^1]:    2 Hotel configurations: Extended feature, Full feature, Basic feature, Limited feature, Rooms only. Configuration is measured according to the number and extent of restaurants/bars, conference/meeting rooms and leisure facilities.

    3 Rooms configurations: Multiple rooms per key, Diversified, All en-suite, Some en-suite, No ensuite

[^2]:    4 We define a city, for this purpose, as a conurbation with population in excess of 100,000; a town as a conurbation with population between 10,000 and 100,000; and a village as a conurbation with a population of less than 10,000.

    5 The global companies are Accor, Carlson, Choice, InterContinental, Hilton, Hyatt, Marriott, Starwood and Wyndham.
